

Experiment – 6

Aim: Writing queries for implementing sub queries.

Q: Write a query using a sub query to find students having attendance above average.

```
mysql> SELECT student_id, name, COUNT(*) AS total_classes FROM student NATURAL JOIN attendance
-> GROUP BY student_id
-> HAVING total_classes > (
-> SELECT AVG(total_count) FROM (
-> SELECT COUNT(*) AS total_count FROM attendance GROUP BY student_id) as avg_table );
```

student_id	name	total_classes
1	Aman	12
2	Anjali	7

Q: Display subjects where present count is greater than absent count

```
mysql> SELECT subject_id, subject_name FROM subject NATURAL JOIN attendance GROUP BY subject_id HAVING SUM(CASE status WHEN "Present" THEN 1 ELSE 0 END) > SUM(CASE status WHEN "Absent" THEN 1 ELSE 0 END) ;
```

subject_id	subject_name
